*pollination systems involving floral mimicry of fruit aspects of their ecology and evolution these systems provide excellent models to investigate the role of visual and olfactory cues for the ecology and evolution of plant animal interactions 1980 novotny et al 2005 suggest that there are diverse and specialized animal taxa, pollinator mediated selection and floral evolution from pollination ecology to macroevolution sapir 2010 new phytologist wiley online library - the second approach used to assess the genetic basis of floral traits influencing pollination interactions is to identify the exact gene or genes and the molecular mechanisms that control floral traits reviewed in sapir 2009b the molecular variation of the exact gene that controls the phenotypic variation is not easy to determine for plants lacking full annotated genomes, flower constancy in insect pollinators adaptive foraging behaviour or cognitive limitation pubmed central pmc - background over 2000 y ago aristotle 340bc observed that honeybee apis mellifera workers visit flowers of only one flower type during a foraging trip 1 this is known as flower constancy and has been shown to occur in a wide range of insect pollinators 1 8 flower constancy is beneficial for plants because it prevents pollen loss to allospecific plants and stigma blocking with, the pollination potential of free foraging bumblebee bombus spp males hymenoptera apidae springerlink* - abstract some species of flowering plants engage in nonmodel deceptive pollination attracting pollinators by large nonmimetic floral displays and providing no reward pollinators can learn to avoid deceptive plants and to favor nectariferous species the reproductive success of these species is expected to be density dependent for two opposite reasons the commoner cheating flowers are the*
